

VIDEO GAME REVIEW ANALYSIS REPORT

Metacritic Video Game Reviews Analysis

Prepared by: Haider B.

Comprehensive exploratory analysis covering critics, users, genres, developers, distributors, ratings, and temporal trends.

Metascore Distribution

Distribution of critic review scores across games.

Insight: Scores cluster in the mid-to-high range, indicating generally favorable critical reception.

Critic vs User Scores

Relationship between critic and user evaluations.

Critics and players often agree, but notable disagreement pockets reveal polarizing titles.

Top Genres by Scores

Comparison of genre-level critic and user reception.

Insight: Certain genres maintain strong appeal across both professional and player audiences.

Genre Score Gap

Difference between user and critic sentiment by genre.

Insight: Some genres are consistently loved by players more than critics, highlighting audience preference gaps.

Top Developers by Metascore

Studios with the highest average critical reception.

Insight: A small group of developers consistently deliver exceptionally reviewed titles.

Developers with Most Games

Studios ranked by number of released games.

High output does not automatically translate into higher review performance.

Top Distributors

Distributors with strong average critical success.

Insight: Publisher quality varies substantially even among large industry players.

Most Unstable Developers

Developers showing high score variability.

Large score volatility suggests inconsistent project quality across releases.

Metascore by Rating

Review performance across ESRB rating categories.

Insight: Age ratings alone are weak predictors of critical success.

Rating Frequency

Distribution of ratings across distributors.

A few rating categories dominate the commercial publishing landscape.

Yearly Score Trends

Average review trends across release years.

Insight: Industry reception shifts over time, revealing changing quality cycles.

Monthly Score Trends

Average review trends across release months.

Release timing shows measurable differences in overall reception.

Project Summary

This report summarizes findings from a full video game review analytics workflow involving data cleaning, feature engineering, aggregation, visualization, Excel reporting, and automated output generation.
